Research:

My current primary area is experimental research on the evolution of social norms including the role of trust, reciprocity and altruism in economic interactions. I also do theoretical and empirical work looking at incentive contracts with applications to franchising, land tenancy and credit markets.

Refereed Publications:

Book:

- “*Experiments in Economics: Playing Fair with Money*”, **Routledge**, London and New York, January 2009.

This book is written for a general audience and provides an overview of economic experiments that explore the role of social norms and norm-driven behaviour - such as notions of fairness, altruism, trust and reciprocity - in economic transactions and how findings in this area can change the way we approach a variety of economic problems such as pricing by firms, writing contracts between parties, making voluntary contributions to charity or providing micro-credit to small entrepreneurs.

Reviewed extremely favorably in the *Journal of Economic Literature*, *Journal of Economic Psychology* and *Journal of Socio-Economics*.
